

BOOK A DOCTOR SYSTEM

Project Execution Guide

Step 1: Setup Frontend (React)

1. Open VS Code terminal.
2. cd client
3. npm install
4. npm run dev
5. Open <http://localhost:5173>

Step 2: Setup Backend (Node.js + Express)

1. Open a new terminal.
2. cd server
3. npm install
4. npm run dev (or npm start)
5. Server runs on <http://localhost:5000>

Step 3: Configure Environment Variables

Create a .env file inside the server folder.

Add:

PORT=5000

MONGO_URI=

JWT_SECRET=

Step 4: Connect MongoDB

Ensure MongoDB Atlas or Local MongoDB is running.

The server connects using Mongoose.

Terminal displays: 'MongoDB Connected'.

Step 5: Execute the Application

- Register a Patient or Doctor.
- Login.
- Browse Doctors.

- | |
|--|
| • Book Appointment. |
| • Doctor updates appointment status. |
| • Admin manages users, doctors and appointments. |

Step 6: Verify APIs

Test the following APIs using Postman:
--

- | |
|----------------|
| • Register |
| • Login |
| • Profile |
| • Doctors |
| • Appointments |

Step 7: Expected Output

Frontend and Backend run successfully.
MongoDB connected.
JWT Authentication works.
CRUD operations execute successfully.
Appointment booking workflow is completed.
